

TRIPTYCHS

The nouns represented below can be divided, according to a certain rule, into 13 groups of 3, with 3 pictures left over. When that is done, take the first letters of the 15 other pictures in the *same rows* as the leftovers, and strike them from the set of first letters of the 21 pictures in *different columns* from the leftovers. The remaining 6 letters in that set, read left to right and top to bottom as they appear in the grid, spell the solution word.

As a solving aid, the pictures within any particular group of 3 are in different rows and columns.
